***Instructions**: Copied or shown assignments will be marked zero. Late submissions are not entertained in any case.*

A final-year student is working on a group FYP project in an educational institute. The project involves software development, documentation, and final presentation. Each group member has different responsibilities, such as coding, testing, report writing, and project management.

Q1. Identify IEEE Principles (Short Answers)

From the IEEE Code of Ethics, identify ANY FIVE principles that apply to the above group project. (Examples: Public, Product, Judgment, Colleagues, Profession, Self, Bribery, Technology)

- **Public** : Software engineers shall act consistently with the public interest. The event management app may collect student data, so the group must ensure privacy, security, and safety for all users.

- **Product**: Software engineers shall ensure that their products meet the highest professional standards. The mobile app must be properly tested, documented, and free from major bugs before final submission.

- **Judgment**: Software engineers shall maintain integrity and independence in their professional judgment. Team members must honestly report progress, delays, or technical problems without hiding issues.

- **Profession**: Software engineers shall advance the integrity and reputation of the profession. The group should follow industry standards, avoid shortcuts that compromise quality, and respect intellectual property.

- **Bribery**: Software engineers shall not offer or accept bribes or unfair advantages. Students should not try to influence evaluators, copy others' work for payment, or request unfair grading through improper means.

Q2. Ethical Issues in Group Projects Mention ANY TWO unethical practices that may occur in group projects (e.g., plagiarism, unfair workload, fake contribution). Explain which IEEE principle is violated in each case.

- **Unethical Practice 1:**

A team member copies code from an open-source repository without adding any citation or permission, claiming it as their own work.

Violated IEEE Principle:
Profession

Explanation:
The Profession principle requires engineers to uphold integrity and respect intellectual property. Copying code without credit is dishonest, damages the profession's reputation, and misrepresents the student's actual contribution.

- **Unethical Practice 2:**

A student offers free movie tickets or gifts to a lab assistant or evaluator in exchange for giving their group extra marks or an extended deadline.

Violated IEEE Principle:
Bribery

Explanation:
The Bribery principle explicitly states that software engineers shall not offer or accept bribes. Even in an academic setting, trying to gain unfair advantages through favors or gifts is a direct violation of ethical conduct.
