***Instructions**: Copied or shown assignments will be marked zero. Late submissions are not entertained in any case.*

A final-year student is working on a group FYP project in an educational institute. The project involves software development, documentation, and final presentation. Each group member has different responsibilities, such as coding, testing, report writing, and project management.

Q1. Identify IEEE Principles (Short Answers)

From the IEEE Code of Ethics, identify ANY FIVE principles that apply to the above group project. (Examples: Public, Product, Judgment, Colleagues, Profession, Self, Bribery, Technology)

From the IEEE Code of Ethics, identify ANY FIVE principles that apply to the above group project.

Answer:

1. Client & Employer : The group must act in the best interest of their supervisor (the client) and the institute (the employer), delivering the project as agreed.

2. Profession : Each member shall advance the integrity of the software engineering profession by being honest about their work and giving accurate progress reports.

3. Management : The project manager (group leader) shall use an ethical approach to assign tasks fairly, set realistic schedules, and not punish members who raise ethical concerns.

4. Bribery : No member shall accept money, favors, or grades in exchange for doing another student's part of the project or sharing code unethically.

5. Technology : The group shall strive to understand the technology they use, including its limitations, risks, and proper application in their project.

Q2. Ethical Issues in Group Projects Mention ANY TWO unethical practices that may occur in group projects (e.g., plagiarism, unfair workload, fake contribution). Explain which IEEE principle is violated in each case.

Answer:

1. A group member accepts payment from another student to share the group's source code

Violated IEEE Principle: Bribery

Explanation: The IEEE Bribery principle states that software engineers shall reject bribery in all its forms. Accepting money to share confidential project code violates academic integrity and professional ethics.

2. The project manager submits false progress reports to the supervisor, claiming work is complete when it is not

Violated IEEE Principle: Profession (and Client & Employer)

Explanation: The Profession principle requires engineers to be accurate in stating the characteristics of software and related work. Falsifying progress misleads the supervisor, damages trust, and harms the profession's reputation.

Instructions:

1. *Due date & time for the assignment is 25th May 2026 till 11:59 PM.*
2. *You have to upload the assignment on Google Classroom.*
